

HydroSkrub/ HydroForce

HydroSkrub (NSF/ANSI Standard 60 Listed) can be used on all AERCO water heaters to dissolve scale and lime deposits. We all know the consequences of ignoring water based scale deposits — costly equipment repairs, downtime and reduced product life. HydroSkrub will keep your equipment protected from under-deposit corrosion and operating at optimum performance.

HydroForce is a pumping system specifically packaged to help facilitate proper cleaning your domestic water heater with HydroSkrub. HydroSkrub dissolves water scale, lime, mud and rust deposits safely quickly and effectively! The HydroForce is a centrifugal pump design with a totally enclosed permanent magnetic drive producing a maximum flow rate of 4.5 gallons per minute. Our high reliability pump has a hollow rotating spindle for internal cooling. This reduces bearing temperatures and has fewer moving parts than a typical pump for this application. The HydroForce twin bearing system handles thrust loads that also extends the service life. The pumping system includes an 8 gallon HDPE open head bucket, mesh reinforced hose, tru-union valves, and essential assorted fittings.
