

HYDROFORCE

HydroForce is a pumping system specifically packaged to help facilitate proper cleaning your domestic water heater with HydroSkrub. HydroSkrub dissolves water scale, lime, mud and rust deposits safely quickly and affectively!

FEATURES

- ✓ 8 gallon HDPE open head bucket, mesh hoses, tru-union valves and essential assorted fittings.
- ✓ Magnetic drive
- ✓ Compact and quite
- ✓ Energy efficient
- ✓ Easy maintenance

DESCRIPTION

AERCO International proudly introduces our new magnetic drive HydroForce pumping system. This pumping system is specifically designed to offer you the best equipment available to keep your equipment clean and scale free. HydroForce is compact, quiet and energy efficient and constructed from high quality components. The HydroForce is a centrifugal pump design with a totally enclosed permanent magnetic motor producing a maximum flow rate of 4.5 gallons per minute. This high reliability pump has a hollow rotating spindle for the internal cooling circuit which reduces bearing temperatures and has fewer moving parts than a typical pump for this application. The HydroForce twin bearing system handles thrust loads that extend its service life. The pumping system includes an 8 gallon HDPE open head bucket reinforced mesh hose, tru-union valves, and essential assorted fittings.
